

# ***Flat-Field Mega-Pixel Lens Series***

Flat-Field Mega-Pixel Lens

Flat-Field NIR Mega-Pixel Lens

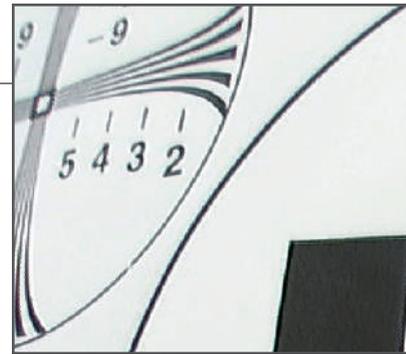

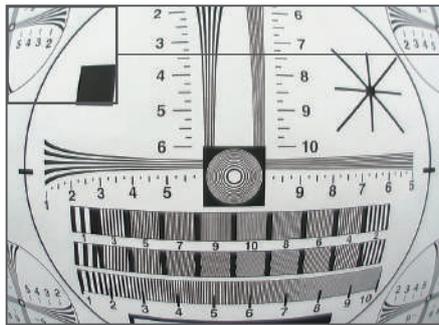

## Delivering Uniformly High-Resolution Image from Corner to Corner

The Tamron Flat-Field Mega-Pixel Lens Series delivers Mega-pixel image quality not only in the center but also in the corners of the image fields, providing the mega-pixel resolution quality needed for image cropping and enlarging of image, irrespective of the location of the subject on the screen. This ensures that subject faces and other relevant information can be clearly identified and distinguished, making the Tamron Flat-Field Mega-Pixel Lenses an ideal solution for high-resolution network surveillance applications. In fact all lenses of the Tamron Mega-Pixel Lens Series lineup deliver Flat-Field Mega-Pixel resolution.

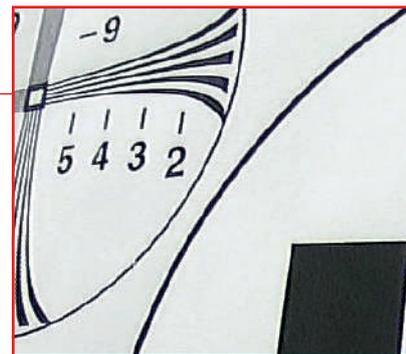

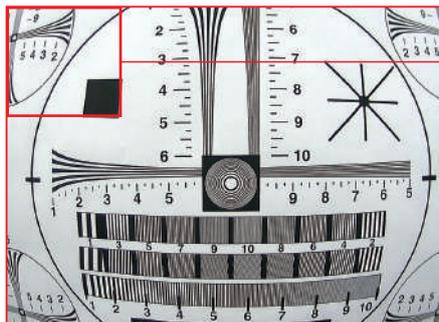

## Screen-Wide Consistent High-Resolution and High-Contrast Image Quality

# Key Mega-Pixel Technologies

## Key Technologies Supporting with Mega-Pixel Compatibility

Each lens in Tamron's Mega-Pixel Vari-Focal Lens Series uses Aspherical elements to minimize optical aberrations and ensure high optical quality while maintaining a compact form. Employing innovative optical technologies, these lenses deliver high-resolution and high-contrast images that are sharp from the center to corner of the image field, and represent the ideal solution for application that uses high-quality mega-pixel cameras.

## Wide Dynamic Range < M13VM308 / M13VG308 >

The fast aperture of F/1.0 makes it possible to obtain vivid color images even in dim lighting conditions such as dark rooms and corridors, or in the early morning or evening hours when the ambient light would ordinarily be insufficient to capture high-quality images. A fast lens is able to gather a large amount of light, thereby enhancing the sensitivity of the camera.

F/1.0 lens has two times light gathering power compared to F/1.4 making a 1 lux camera sensitivity into a 0.5 lux sensitivity.

## Multiple-Layer Coatings

Multi-coating is applied to internal and external lens surfaces to minimize ghosting and flare in backlit situations. The result is consistently sharp contrast and excellent image quality even under unfavorable lighting conditions.

## Supporting up to 1/2.7" Sensors

<M13VM288IR / M13VG288IR / M13VP288IR / M13VG850IR / M13VP850IR>

The large image circle makes it possible to match with 1/2.7", as well as 1/2.8" and 1/3" sensor sizes. Due to variance in such sensor sizes, it was essential to incorporate such design.

## P-Iris < M118VP413IR / M13VP288IR / M13VP850IR >

By using a stepping motor to control the iris, these lenses are capable of adjusting the aperture at a position that does not cause diffraction, enabling an appropriate level of exposure by utilizing the camera shutter speed.\* The result is that high-quality, high-contrast images can be recorded, even in bright outdoor areas. This fine tuning control will allow the user to acquire the best image quality delivering good depth of field at most installations.

\* Connecting the lens to a camera that does not support the P-Iris technology may cause malfunction.  
The lens cannot be connected to cameras that use DC auto iris or video auto iris lenses

## Compact Design

Mega-pixel resolution is achieved while maintaining the compactness of conventional lenses.

## Slip-Mount Mechanism

Each lens is equipped with a slip-mount mechanism that allows rotational adjustment of the lens after it is mounted on a camera. This allows optimal positioning of the auto-iris actuator and cable during installation.

\* Except for M118VM413IR / M118VG413IR / M118VP413IR

## Locking Mechanism for Each Control Ring

Each control ring for zoom, focus, and iris size\* can be independently locked to prevent setting displacement after installation.  
(\*Manual iris only)

## Large Focus Rotation Angle

The rotation angle of the focus ring has been increased to achieve easier and more precise focus adjustment for mega-pixel cameras.

## Precision Manufacturing

Each component in our Flat-Field Mega-Pixel Lenses are produced and assembled using the most advanced precision manufacturing techniques to prevent image degradation due to local blur and focus shift.

## 3-Mega-Pixel Quality that Meets or Exceeds Full HD 1080P in Both the Visible and NIR Spectrums

### Two Lenses Cover 2.8mm to 50mm

The lenses cover wide angle 2.8mm to telephoto 50mm, which means that most applications can be covered by these two lenses. The horizontal angle of view is 124.3 degree at wide and 6.6 degree at telephoto end. (1/2.7" sensor)

### Fast F Number

The full open aperture of the standard lens is F/1.2 and for the telephoto lens F/1.6. This will enable the lens to be used under low light situation yet delivering the mega-pixel resolution.

### Compatible with Current Camera Design

Internal components in the vicinity of the imager are designed to minimize protrusion from the lens mount face for full compatibility with most surveillance cameras in the market.

### Superb Picture Quality

Designed to minimize color aberrations, ghost, and flare for top picture quality.

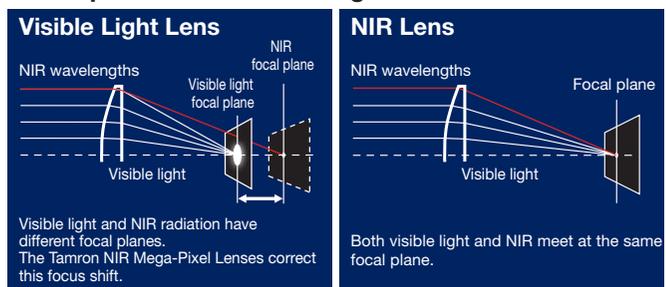

## 3-Mega-Pixel / Full HD Resolution for 24/7 Surveillance

NIR radiation refracts differently from visible light, causing blurring in an image captured in the NIR spectrum. Tamron NIR Mega-Pixel Lenses utilize cutting-edge optical design technology and advanced low dispersion glass to converge the focal points of visible light and NIR radiation, providing 3-mega-pixel image quality 24-hours a day.

## Exceptional Image Quality in the Visible and NIR Spectrums

With conventional lenses, image focus shift will occur in the surveillance camera video footage, shot under the NIR illumination. NIR wavelength will be refracted differently from the visible light, which results in out of focus image when switching to night mode. The Tamron NIR Mega-Pixel Lens Series features the latest optical design incorporating the low dispersion glass, Aspherical elements and special coating technology, which resolves the focus shift issue. As a result, the lens will provide clear image of 3-mega-pixel even in black and white mode enabling the true mega-pixel 24-hours surveillance regardless of the lighting condition.
